## Brick dump

### Project

For many years FRUTIGER has worked in a brick dump in West Germany during the summer. With high standard of work and excellent customer satisfaction this longtime cooperation has continued.

### Performance

Around 180'000m<sup>3</sup> argil were scraped and transported to a dump. The system Scrapedozer guarantees a absolutely homogenous mix of the recourse in highest quality through the special scraping and dumping.

To optimise the energy costs, the argill should be scraped during dry weather periods. Then the enormous daily output is twice as profitable
