## Highway Building Site

### Project

Development in Germany of the BAB71, Erfurt towards Nordhausen. Our client STRABAG, branch office Erfurt, requested that we carried out topsoil stripping and mass balancing. To do this we used two Scrapedozers, type SR 3000 and SR 2001.

### Performance

100'000 m<sup>3</sup> topsoil stripping on a distance up to 100m, 50'000m<sup>3</sup> area regulation. In spite of problems with the drenched ground and precarious space availability on the dumpsite because of a higher cubature, we met the requested 5000m<sup>3</sup> per working day.

Scrape on drenched ground

Discharging of the bucket

Quick returning Tiger (20 km/h)
