

Reference sheet

Large scale operation airport

Project

On the building project airport Leipzig (Germany) the Tiger showed his capability when it was ordered by the company Josef Möbius . It was required to move around 5 million m³ on three different distances. The company benefitted from the flexible machinery and on middle distance three Scrapedozer were in use.

Performance

Performance data per 1 Men + 1 machine:

Distance from 0 to 100 m: 31 loads with 15 m³ per hour (465 m³).

Distance 500 m: 13 loads with 15 m³ per hour (195 m³).

In other words - the TIGER is ideal for earth moving up to 500 m distance and would justify inclusion on every calculation sheet.

Dumping of topsoil on a distance of 100m

Mass balancing on 500m distance

During scraping the Tiger bares his teeth
